⚠ WARNING

SAFETY LEGEND

⚠ WARNING

Read and understand operator's manual before using this equipment.

⚠ WARNING

Eye protection is required when operating this equipment.

⚠ WARNING

Hearing protection is recommended when operating this equipment.

⚠ WARNING

Respiratory protection is recommended operating this equipment.

⚠ WARNING

- A HEPA Filter must be installed in this vacuum at all times.
- If this vacuum is used to collect hazardous material, appropriate personal protective equipment may be required.
- Any alteration to this equipment by a third party will nullify its warranty.

⚠ WARNING

Do not use this equipment for cleaning or extracting fuel residues from any vehicle or equipment.
Do not use this equipment for cleaning or extracting live sparks or burning embers.
Do not use this equipment in combustible dust or gas atmospheres.

WHAT'S IN THE BOX

WarHog WC Power Head

NOTE: Clayton vacuum tanks ship in their own box and include bags, filters, and other components. These instructions assume you have both a power head and an appropriate Clayton vacuum tank. Refer to the instruction manual included with the vacuum tank for additional information.

SPECIFICATIONS & REQUIREMENTS

PHYSICAL:

603-WC-4

Weight TBD lbs (TBD kg)
Dimensions (Diameter x Height) 17.00 x 9.25 in (43.2 x 23.5 cm)

612-WC-4

Weight TBD lbs (TBD kg)
Dimensions (Diameter x Height) 12.00 x 9.25 in (31.8 x 23.5 cm)

619-WC-4

Weight TBD lbs (TBD kg)
Dimensions (Diameter x Height) 19.00 x 9.25 in (49.5 x 23.5 cm)

Sound Level 79 dBA

POWER CONSUMPTION:

Pressure 90 psi (621 kPa)
Flow 60 CFM (102 SCMH)

FILTRATION:

HEPA Filter Efficiency 99.995% @ 0.3 μ m (H14)
Filter Bag Efficiency 95% @ 0.5 micron

PERFORMANCE:

Vacuum Flow 105 CFM (179 SCMH)
Vacuum Suction 180 inH₂O (45 kPa)

GETTING STARTED

1. The vacuum power head and the vacuum tank ship in separate boxes.
2. Unbox the vacuum power head.
3. Visually inspect the power head to verify that no parts are missing or damaged.
4. Familiarize yourself with the power head.

⚠ WARNING

5. Power Head Vents:
- NEVER BLOCK THE POWER HEAD VENTS.
 - NEVER WRAP THE POWER CORD AROUND THE POWER HEAD VENTS.

GETTING STARTED

Prepare the vacuum for use.

1. Install a filter bag on the tank.

- Unfold and fluff a new filter bag.
- Push the inlet tube into the hole on the cardboard collar of the filter bag.
- Grasp the sides of the cardboard collar and push it all the way onto the inlet tube.
- Verify the bottom of the collar is past the opening on the underside of the inlet tube.

2. Unbox a new HEPA filter.

- Remove the Clayton HEPA timer card from the box and set aside.
- Remove the HEPA cable lock from the box and set aside.
- Remove the HEPA filter from the box and remove from plastic bag.

3. Install a new HEPA filter.

- Holding the power head on its side, screw the new HEPA filter onto the filter adapter.
- Verify the white inner ring of the HEPA filter is fully seated against the underside of the power head.
 - If it is not, rotate it clockwise until fully seated.
- Refer to the instructions included with the HEPA cable lock to install the cable lock.

4. Attach the power head.

- Position the power head on the tank.
- Rotate the power head so that the Compressed Air Control valve on the power head is aligned with the inlet port on the vacuum tank.
- Latch the power head to the tank.

5. Activate the HEPA filter timer.

- Attach the new HEPA timer card with a zip tie (included) to the top handle of the vacuum.
- Follow the directions on timer card to activate it.

COMPRESSED AIR FITTINGS

The vacuum has the following compressed air requirements to function properly:

- Compressed air must be clean, dry, and oil free to prevent blockage of the pneumatic system.
- Compressed air line and fittings must have a minimum diameter of ½ in (13 mm).

Compressed Air Plug (Air In)

- The Vacuum is supplied with a ½ in (13 mm) industrial interchange compressed air plug for connection to your compressed air supply.

The Compressed Air Plug may be changed to another nominal ½ in (13 mm) style if required.

- Hold the Compressed Air Control Valve with a ⅞ in (22 mm) open end wrench.
- Remove the compressed air plug with either a ⅞ in (22 mm) deep socket or ⅞ in (22 mm) open end wrench.
- Install a new compressed air plug.

BEFORE EACH USE

1. Attach the vacuum hose.

- Open the Inlet Port on the vacuum tank.
- Insert the metal sleeve of the vacuum hose into the Inlet Port on the vacuum tank.

2. Activate the vacuum.

- Rotate the Compressed Air Control valve to the ON position.

BAG FILTER CHANGE

If this vacuum is used to collect hazardous material, appropriate personal protective equipment may be required.

The bag filter should be replaced when $\frac{3}{4}$ full.

1. Safe the vacuum.

- Disconnect the vacuum from power source.
- Remove all hoses from the vacuum.

2. Remove the power head.

- Unlatch the power head from the tank.
- Lift the power head and the attached HEPA filter off the tank using the top handle.
- Carefully place the power head on the floor – avoid damaging the HEPA filter.

3. Remove the filter bag.

- Grasp the cardboard collar of the bag filter and slide it off the inlet port on the vacuum tank.
- Holding your hand over the opening on the bag, lift the bag out of the tank.
- Dispose of the bag according to company policy.

4. Install a new filter bag.

- Unfold and fluff a new filter bag.
- Push the inlet tube into the hole on the cardboard collar of the filter bag.
- Grasp the sides of the cardboard collar and push it all the way onto the inlet tube.
- Verify the bottom of the collar is past the opening on the underside of the inlet tube.

5. Verify the HEPA filter is seated.

- Holding the power head on its side, examine the HEPA Filter.
- Verify the white inner ring of the HEPA filter is fully seated against the underside of the power head.
 - If it is not, rotate it clockwise until fully seated.

6. Replace the power head.

- Position the power head on the tank.
- Rotate the power head so that the Compressed Air Control valve on the power head is aligned with the inlet port on the vacuum tank.
- Latch the power head to the tank.

PRE-FILTER CHANGE

If this vacuum is used to collect hazardous material, appropriate personal protective equipment may be required.

Replace the pre-filter every five (5) bag filter changes or when it becomes visibly dirty.

1. Safe the vacuum.

- Disconnect the vacuum from the power source.
- Remove all hoses from the vacuum.

2. Remove the power head.

- Unlatch the power head from the tank.
- Lift the power head and the attached HEPA filter off the tank using the top handle.
- Carefully place the power head on the floor – avoid damaging the HEPA filter.

3. Remove the pre-filter.

- The pre-filter is wrapped around the HEPA filter and secured with Velcro.
- Find the seam and carefully peel the Velcro apart.
- Dispose of the pre-filter according to company policy.

4. Install a new pre-filter.

- Unfold a new pre-filter and remove the thin Velcro cover strip from the Velcro hooks.
- Wrap the pre-filter tightly around the HEPA filter.
- Secure the pre-filter by adhering the Velcro hooks to the side of the pre-filter.

5. Verify the HEPA filter is seated.

- Holding the power head on its side, examine the HEPA Filter.
- Verify the white inner ring of the HEPA filter is fully seated against the underside of the power head.
 - If it is not, rotate it clockwise until fully seated.

6. Replace the power head.

- Position the power head on the vacuum tank.
- Rotate the power head so that the Compressed Air Control valve on the power head is aligned with the inlet port on the vacuum tank.
- Latch the power head to the tank.

HEPA FILTER CHANGE

If this vacuum is used to collect hazardous material, appropriate personal protective equipment may be required.

The HEPA filter should be replaced when it is damaged, clogged, or when the HEPA timer card has reached 12 months. *Never attempt to clean the HEPA filter as this will damage it.*

1. Safe the vacuum.

- Disconnect the vacuum from the power source.
- Remove all hoses from the vacuum.

2. Remove the power head.

- Unlatch the power head from the vacuum tank.
- Lift the power head and the attached HEPA filter off the tank using the top handle.
- Carefully place the power head on the floor – avoid damaging the HEPA filter.

3. Unbox a new HEPA filter.

- Remove the Clayton HEPA timer card from the box and set aside.
- Remove the HEPA cable lock from the box and set aside.
- Remove the HEPA filter from the box and remove it from the plastic bag.

4. Remove the old HEPA filter.

- Holding the power head on its side cut the HEPA cable lock and remove it.
- Unscrew the HEPA filter from the filter adapter.
- Dispose of the HEPA filter according to company policy.

5. Install a new HEPA Filter

- Holding the power head on its side, screw the new HEPA filter onto the threaded filter adapter.
- Verify the white inner ring of the HEPA filter is fully seated against the underside of the power head.
 - If it is not, rotate it clockwise until fully seated.
- Refer to the instructions included with the HEPA cable lock to install the cable lock.

6. Replace the power head.

- Carefully position the power head on the vacuum tank.
- Rotate the power head so that the Compressed Air Control valve on the power head is aligned with the inlet port on the vacuum tank.
- Latch the power head to the vacuum tank.

7. Activate the HEPA filter timer.

- Remove the old HEPA timer card from the power head.
- Attach the new HEPA timer card with a zip tie (included) to the top handle of the vacuum.
- Follow the directions on the timer card to activate.

LIMITED LIFETIME WARRANTY TERMS AND CONDITIONS

Warranty Terms

Clayton Associates, Inc. guarantees its manufactured products against defects in materials or workmanship and will either repair or replace all parts that prove defective under normal use during the lifetime of the products. The warranty period shall commence from the date of paid invoice.

This warranty does not cover (a) repairs due to normal wear, accident, neglect, misuse, or use other than as indicated in the instruction booklet (b) products manufactured by third parties and distributed by Clayton (c) wear items such as bearings, rotor blades, regulators, valve stems, levers, shrouds, guards, O-rings, seals, gaskets, motor brushes, and other wearable parts.

Repair within the Continental US

During the first 90 days of the warranty period, Clayton will provide parts and labor to the customer's site at no charge or pay freight costs associated with returning the products for repair to a Clayton selected service location and repair the product at no charge. Clayton personnel will determine the best way to repair the product.

Past 90 days, Clayton will provide parts to the customer's site at no charge or the customer may ship the product to a Clayton selected service location at customer's expense and Clayton will repair the product at no charge and provide return shipping.

Repair Outside the Continental US

Clayton will provide parts to the customer's site at no charge or the customer may ship the product to a Clayton selected service location at customer's expense and Clayton will repair the product at no charge and provide return shipping.

Limitation of Liability

Clayton shall not in any event be liable for any damages, loss of production time or profits, whether based on contract, warranty, negligence, strict liability or otherwise, including without limitation any consequential, incidental or special damages, arising with respect to the equipment or its failure to operate.

Clayton Associates, Inc. makes no other warranty or representation of any kind, except that of title, and all other warranties, express or implied, including warranties of merchantability or fitness for any particular purpose, are hereby expressly disclaimed.

Clayton products are proudly made in the USA
